

BECOMIX laboratory homogenizing mixer type RW 30 CD

Description

This laboratory mixing device has the same features as the production plants homogenizers with pump mode and homogenizer mode, anchor stirrer, double jacket with heating/cooling, vacuum pump and control. All elements are integrated into a wheeled mobile laboratory table.

- maximum batch volume: 25 liters
- minimum batch volume: up to 3 liters
- automatic rotation change system
- lid lifting device
- Control of the functions by means of PLC, make Siemens

Applications

Our Laboratory Homogenizing Mixer is used for product and process development, clinical samples, production of small quantities, and scale-up for pharmaceutical and cosmetic products, such as pharmaceutical creams and gels, cosmetic creams, tooth paste, gel products, mascara, make-up.

We can create processes identical to those later realized on the production scale. This allows for product development under production conditions and later simplifies transfer and scaling up of the processes.

About Aptys Pharmaceuticals

APTYS is a CRDO (contract research and development organization) which develops innovative products based on its expertise in pharmaceutical technologies and peptide delivery.

☞ Our customers benefit from our know-how and creativity with a strong guarantee of high quality.

APTYS offers ISO9001 aligned contract service, according to cGMP.

- ✓ Custom-made formulation development including in vivo/in vitro assessments.
- ✓ Semi solid dosage forms for topical and transdermal delivery.
- ✓ Injectable peptide depot formulations.
- ✓ Analytical development and validations.
- ✓ Quality control and ICH stability.
